Implementation Sciences International, Inc. (ISII), a research-based, non-profit organization, trains community practitioners in Parent Management Training – Oregon Model (PMTO®).

ISII is an affiliate of Oregon Social Learning Center (OSLC) in Eugene, Oregon. For over four decades, OSLC scientists and practitioners have tested theory-based programs to treat and prevent conduct and associated behavior problems in children and adolescents.

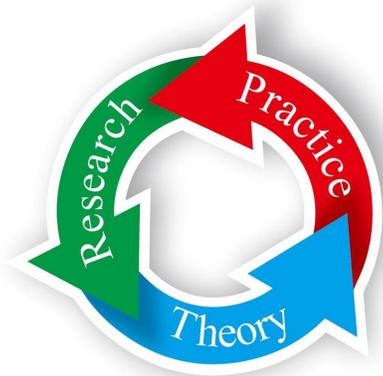

In the last fifteen years, ISII has been implementing and researching the PMTO intervention. Our staff bring evidence-based interventions out of the research setting into the “real world.” ISII’s network of clinical and prevention scientists and practitioners extends PMTO programs to agencies serving families with children and adolescents with mild to severe behavioral problems. Our network comprises professionals from North and South America and Europe; they represent the disciplines of social work, clinical psychology, counseling psychology, marriage and family therapy, and school psychology. Together, we train community practitioners in proven practices that help families prevent and resolve behavior problems of their children and adolescents.

*Our skilled staff provides training and support
for PMTO implementation projects around the world.*

*Using evidence-based PMTO principles, we create a strength-based, supportive
experience that builds positive relationships with our partners on all levels.*

ISII

ISII has trained hundreds of clinicians, administrators and professionals who in turn have trained thousands more.

PMTO and PMTO informed prevention and treatment methods have been implemented around the world:

Norway, Iceland, the Netherlands, Denmark, Mexico and Canada
Oregon, Michigan, Kansas and New York City

Because science is our middle name, we promote research within each implementation and collaborate to sustain model fidelity.

Training programs engage participants in modeling, role play, hands-on exercises, and problem-solving processes to tailor PMTO programs to the specific needs of each community.
